---

Full-stack engineer with 4+ years of experience in web development, specializing in JavaScript, TypeScript, PostgreSQL and scalable cloud infrastructure. Proven expertise in e-commerce, analytics, and PaaS delivering high-impact solutions that improve efficiency, automation, and system reliability. Passionate about leadership, mentoring, and driving technical excellence in high-growth environments.

## PROFESSIONAL EXPERIENCE

**Rapptr Labs** (Remote - New York, NY) – **Backend Engineer** | Feb 2023 - Present

### Leadership Experience

- Reduced time-to-hire by 50% by collaborating with hiring managers on technical interviews and cultural fit assessments
- Accelerated new hire productivity through structured onboarding sessions and code reviews, improving ramp-up time by 40%

### Product Contributions

#### [ShoBizzy - Cloud-native social networking and production/show business app](#)

- Led full-stack development using TypeScript (NextJS) and implemented a candidate search algorithm leading to a 70% improvement in matches
- Implemented event-driven architecture, integrating AWS Lambda and SendGrid for real-time notifications and increasing customer engagement by 30%

#### [Alter - Fitness and health based multi-platform app](#)

- Built a real-time data pipeline linking Shopify, Salesforce, UPS, and Braze, streamlining cross-platform transactions and analytics
- Reduced manual errors by 90% through automation with AWS EventBridge, SQS-triggered Lambda functions, and webhook integrations
- Enhanced system scalability with Docker, Kubernetes, ensuring high availability and fault tolerance

#### [Moonlite - Storybook projector companion app](#)

- Led full-stack development with Python (Django), producing comprehensive post-acquisition technical documentation to streamline transitions
- Maintained and optimized AWS infrastructure, reducing cloud costs by 13% YoY across RDS, CloudWatch, EC2, and Lambda services

---
