GitHub | Portfolio | LinkedIn

Creative, detail-oriented software engineer that is dedicated to quality work. Proven track record of creating and implementing successful full stack applications.

SKILLS

Proficient: JavaScript, Python, ReactJS, MySQL, REST APIs, Docker, Git/GitHub, HTML, CSS
Familiar: Prisma ORM, NextJS, Google Cloud Platform, AWS, Django, TailwindCSS, Java, Linux, noSQL

EXPERIENCE

100Devs (Washington, D.C) – **Software Engineer** | Jan 2022 - Present
- Collaborated with a team of frontend developers and built several full stack applications using JavaScript, ReactJS, Express, and Prisma
- Developed a full stack web application using TypeScript, ReactJS, Express and MongoDB designed to be a personal hub of tasks, goals, finances and events

Web/Mobile Consulting (North Bethesda, MD) – **Software Consultant** | Jan 2022 - Present
- Consulted and executed redesign of client's ecommerce website by introducing modern JavaScript libraries and payment APIs
- Independently constructed a Flask web application for small club of 50 daily users designed to keep track of club check-ins, contributions, and upcoming events

Basic Printing (Remote - GA) – **Head Graphic Designer** | May 2018 - May 2021
- Built 'Finance Dashboard' Spring Boot full stack application that helped increase productivity for our accounting team and provided basic insight for future finances
- Managed the Digital Fusion department and collaborated with product teams to complete 100+ tasks daily
- Produced over 500 artwork pieces daily with 95% customer satisfaction

---

PROJECTS

Superchat - Github | Demo
Technologies: ReactJS, JavaScript/JSX, Google Cloud Firebase, HTML/tailwindCSS
- Full stack chat application for communication between friends or others
- Real-time updates with Google Cloud Firestore document database
- Up to 20 message records in message history to view

E-Commerce Cart - Github | Demo
Technologies: ReactJS, TypeScript/TSX, HTML/CSS, Vite
- Single page Web application utilizing React Router and localStorage
- Scalable and type safe with context, custom hooks and state management
- Simple UI to create a cart, view individual prices, and clear the entire cart

ClearSky - Github | Demo
Technologies: ReactJS, JavaScript/JSX, HTML/CSS, Vite
- Web application utilizing the OpenWeather API
- Built, bundled, and minified with Vite
- Search by city with instant metric updates on request
